

## PAB PRODUCT CHART

**Perdue AgriBusiness** is committed to improving the profitability of the dairy producer by providing high quality and consistent feed ingredients. Today's dairy market is heavily driven by milk component pricing and amino acid balancing allows dairy producers to lower CP costs while maximizing milk components. The greatest cost efficacy of amino acid balancing occurs when lactating diets are lowered nearer 16% CP, saving protein input costs and opening space in the ration for increased energy inclusion.

Blood products are often high in digestible lysine and histidine, but meeting methionine requirements for high-producing dairy cattle requires additional supplementation with protected amino acids. Supplementation of blood products with a protected methionine yields a complete amino acid balancing package in a highly concentrated and bioavailable package. Perdue AgriBusiness Animal Nutrition carefully considers protected methionine source bioavailability and value to provide the best combination of product consistency, quality and bioavailability to the dairy cow.

Amino Acid Products	Crude Protein*	RUP	RUP DIG	dRUP*	dRUP Lysine*	dRUP Methionine*
	81.7	90.2	91.7	67.6	5.8	0.8
	79.5	87.4	85.3	59.3	4.5	0.6
	86.1	85.4	75.1	55.2	3.2	0.5
	75.0	77.7	71.0	41.4	2.1	0.4
	89.5	92.8	90.5	75.2	6.7	4.2

Fatty Acid Product	Total Fatty Acids*	C16:0*	C18:0*	C18:1 cis*
	96.0	81.6	5.0	10.0
